

7-Day Sugar-Control Kickstart Meal Plan

Your First Step to Stable Blood Sugar — One Day at a Time

Your First Step to Stable Blood Sugar — One Day at a Time

Part of the 100+ Diabetic-Friendly Indian Recipes Bundle

A Personal Note from Your Dietitian:

"Changing your diet feels overwhelming on Day 1. But I promise you — if you follow this 7-day plan exactly as written, you will feel a noticeable difference in your energy levels, post-meal heaviness, and blood sugar readings by Day 7. This is not about starvation. This is about eating MORE of the right things. Let's begin." — Senior Dietitian, 20+ Years Clinical Experience

■ HOW THIS PLAN WORKS

The Science Behind It (In Simple Language)

Every food you eat gets broken down into sugar (glucose) in your blood. The **Glycemic Index (GI)** is a score from 0–100 that tells you how fast a food raises your blood sugar.

GI Score	Category	What it means
0–55	■ Low GI	Releases sugar slowly. SAFE & IDEAL for you.
56–69	■ Medium GI	Moderate sugar release. Eat in small portions.
70–100	■ High GI	Rapid sugar spike. Avoid or minimize.

3 Golden Rules for This Week

1. **Never skip meals.** Skipping meals causes a dangerous sugar crash followed by a spike.
2. **Eat within 30 minutes of waking up.** This stabilizes the morning cortisol-sugar spike.
3. **Walk for 10–15 minutes after lunch and dinner.** This alone can reduce post-meal sugar by 20–30 mg/dL.

What to Expect This Week

- **Day 1–2:** Your body is adjusting. You may feel slightly less full than usual (normal).
- **Day 3–4:** Energy starts stabilizing. Post-meal sluggishness reduces.
- **Day 5–7:** Noticeable reduction in post-meal sugar spikes. Better sleep quality.

■ DAY 1 — THE GENTLE START

Theme: Introduce your body to low-GI eating without shocking it.

■ Breakfast (7:30 AM – 8:30 AM)

Moong Dal Chilla (Green Moong Pancakes) with Green Chutney

Detail	Value
Quantity	2 medium chillas + 2 tbsp green chutney
GI Score	38 (Low GI ■)
Prep Time	15 minutes
Calories	~220 kcal
Protein	12g

Why it works: Moong dal is one of India's best diabetic foods. High in plant protein and fiber, it slows glucose absorption dramatically. The green chutney (coriander + mint) contains compounds that actively help insulin sensitivity.

Quick Recipe:

- Soak 1 cup whole moong dal overnight. Grind to a smooth batter.
- Add salt, jeera, green chilli, grated ginger.
- Make thin pancakes on a non-stick tawa with ½ tsp oil each.
- Serve with fresh coriander-mint chutney.

■ Mid-Morning Snack (10:30 AM)

1 medium Guava + 5 Almonds (soaked overnight)

Detail	Value
GI Score	Guava: 12 (Very Low ■), Almonds: ~0
Why this works	Guava has the lowest GI of any common Indian fruit. Almonds provide healthy fats that further slow sugar release.

■ Lunch (1:00 PM – 2:00 PM)

Bajra Roti (2) + Methi Dal + Kakdi Raita

Detail	Value
Quantity	2 small bajra rotis + 1 katori methi dal + 1 katori kakdi raita
GI Score	Bajra Roti: 54 (Low GI ■), Methi Dal: 30 ■
Prep Time	25 minutes
Calories	~380 kcal

Why it works: Bajra (pearl millet) has a significantly lower GI than white wheat. Methi (fenugreek) contains galactomannan — a natural compound proven to slow glucose absorption. Kakdi (cucumber) raita adds fiber and hydration.

Methi Dal Recipe:

- Cook 1 cup masoor dal until soft.
- In a pan, heat 1 tsp ghee. Add jeera, hing, green chilli, tomato.
- Add 1 cup fresh methi leaves. Cook for 5 mins.
- Add cooked dal, turmeric, salt, coriander powder. Simmer 10 mins.

■ Evening Snack (4:30 PM – 5:00 PM)

1 cup Roasted Chana + 1 cup unsweetened Tulsi-Ginger Green Tea

Detail	Value
GI Score	Roasted Chana: 28 (Very Low ■)

Why this works	Roasted chana is the ideal Indian snack for diabetics. High protein, high fiber, very low GI. Tulsi-ginger tea has natural blood-sugar regulating properties.
----------------	---

■ Dinner (7:30 PM – 8:30 PM)

Jowar Roti (2) + Palak Paneer (low-oil) + Mixed Salad

Detail	Value
Quantity	2 jowar rotis + 1 katori palak paneer + 1 bowl salad
GI Score	Jowar Roti: 52 (Low GI ■), Palak: 15 ■, Paneer: ~27 ■
Prep Time	30 minutes
Calories	~420 kcal

Why it works: Jowar (sorghum) is a superfood for diabetics. Its high fiber content means sugars are released very slowly over 3–4 hours. Palak (spinach) contains magnesium, which improves insulin sensitivity. Paneer provides protein which further stabilizes blood sugar.

■ Day 1 Hydration Goal

- **Water:** Minimum 2.5 liters throughout the day.
- **Avoid:** Packaged juices, soft drinks, flavored water, chai with sugar.
- **Allowed:** Plain water, jeera water, coriander-seed water, green tea (no sugar).

■ Day 1 Tip

Before sleeping tonight, take 1 tsp of apple cider vinegar (ACV) in 100ml of water. Studies show this reduces fasting blood sugar the next morning by 4–6%.

■ DAY 2 — THE PROTEIN BOOST

Theme: Load up on plant protein to keep hunger away and sugar stable all day.

■ Breakfast (7:30 AM – 8:30 AM)

Dalia Upma (Broken Wheat) with Vegetables

Detail	Value
Quantity	1.5 cups cooked dalia upma
GI Score	41 (Low GI ■)
Prep Time	20 minutes
Calories	~240 kcal

Why it works: Broken wheat (dalia) has far more fiber than suji or white rice. It keeps you full until lunch, preventing mid-morning cravings and snacking.

Quick Recipe:

- Dry roast ½ cup broken wheat until golden.
- In oil, add mustard seeds, curry leaves, onion, green chilli.
- Add chopped vegetables (carrot, beans, peas). Sauté 3 mins.
- Add roasted dalia + 1.5 cups water. Cook covered for 15 mins.
- Garnish with fresh coriander and lemon juice.

■ Mid-Morning Snack (10:30 AM)

1 small Pear + 1 tbsp pumpkin seeds

GI Score	~38 (Low ■)
----------	-------------

■ Lunch (1:00 PM – 2:00 PM)

Brown Rice (small portion) + Rajma + Lauki Sabzi + Salad

Detail	Value
Quantity	½ cup cooked brown rice + 1 katori rajma + ½ cup lauki sabzi + salad
GI Score	Brown rice: 55 (Borderline Low ■ in portion), Rajma: 28 ■
Prep Time	35 minutes
Calories	~410 kcal

Why it works: Rajma (kidney beans) have one of the lowest GI scores of any food. They are packed with protein and fiber. Eaten WITH brown rice, rajma actually lowers the overall GI of the meal. Lauki (bottle gourd) is 96% water and a natural cooling agent for the body.

■ Evening Snack (4:30 PM)

Handful of Walnuts (4–5) + 1 cup buttermilk (plain, no sugar)

GI Score	Walnuts: ~15 ■
----------	----------------

Why it works: Walnuts contain alpha-linolenic acid (ALA), which reduces inflammation associated with insulin resistance. Buttermilk has probiotics that improve gut health — directly linked to better blood sugar regulation.

■ Dinner (7:30 PM – 8:30 PM)

Multigrain Roti (2) + Chana Dal + Baingan Bharta

Detail	Value
Quantity	2 multigrain rotis + 1 katori chana dal + ½ cup baingan bharta
GI Score	Chana Dal: 11 (Extremely Low ■)
Prep Time	30 minutes
Calories	~390 kcal

Why it works: Chana dal has a GI of only 11 — one of the lowest of any food on earth. Baingan (brinjal/eggplant) contains nasunin, which reduces oxidative stress on pancreatic cells.

■ Day 2 Hydration Goal

- Drink 1 glass methi-soaked water (soak 1 tsp methi seeds in a glass of water overnight). Drink in the morning on an empty stomach.

■ Day 2 Tip

Start your Day 3 prep tonight: Soak ¼ cup whole moong and ¼ cup chana overnight in separate bowls for tomorrow's lunch.

■ DAY 3 — THE FIBER FOCUS

Theme: Flood your system with fiber to slow every glucose spike.

■■ Breakfast (7:30 AM – 8:30 AM)

Oats Idli (4–5 pieces) with Sambar and Coconut Chutney

Detail	Value
Quantity	4–5 oats idlis + 1 katori sambar + 2 tbsp chutney
GI Score	Oats Idli: 44 (Low ■)
Prep Time	20 mins (batter prep the night before)
Calories	~280 kcal

Quick Recipe:

- Dry roast 1 cup oats. Cool and powder coarsely.
- Mix with ½ cup curd, salt, eno (½ tsp). Rest 10 mins.
- Steam in idli moulds for 10–12 minutes.
- Serve hot with fresh sambar (use lots of vegetables — drumstick, tomato, onion).

Why it works: Oats contain beta-glucan — a special fiber that forms a thick gel in the stomach, dramatically slowing glucose absorption. Regular oat consumption reduces HbA1c over 3–6 months.

■ Mid-Morning Snack (10:30 AM)

1 cup Sprouts Salad (moong + chana sprouts, lemon, chaat masala)

GI Score	Sprouted Moong: 25 ■
----------	----------------------

Why it works: Sprouting increases the nutrient density and reduces the GI further. This is the single best mid-morning snack for diabetics.

■ Lunch (1:00 PM – 2:00 PM)

Bajra Khichdi + Low-fat Curd + Salad

Detail	Value
Quantity	1.5 cups bajra khichdi + 1 cup curd + salad
GI Score	Bajra Khichdi: 45 ■
Prep Time	30 minutes
Calories	~370 kcal

Bajra Khichdi Recipe:

- Wash ½ cup bajra and ¼ cup moong dal.
- In pressure cooker, add 1 tsp ghee. Sauté jeera, ginger.
- Add bajra, dal, turmeric, salt. Add 3 cups water.
- Pressure cook for 4 whistles. Serve with curd and salad.

■ Evening Snack (4:30 PM)

Roasted Makhana (Foxnuts) — 1 cup + green tea

GI Score	Makhana: 14 (Extremely Low ■)
----------	-------------------------------

Why it works: Makhana is India's best kept diabetic snack secret. Low calorie, very low GI, and highly satisfying. A 1-cup serving has only 90 calories.

■ Dinner (7:30 PM – 8:30 PM)

Ragi Roti (2) + Arhar Dal + Bhindi Sabzi

Detail	Value
Quantity	2 ragi rotis + 1 katori arhar dal + ½ cup bhindi sabzi
GI Score	Ragi: 69 (borderline — but eaten with dal and sabzi, overall meal GI drops to ~45)
Prep Time	25 minutes
Calories	~400 kcal

Why it works: Ragi (finger millet) is exceptionally high in calcium and dietary fiber. Bhindi (okra) contains a special compound called mucilage that slows gut glucose absorption — directly lowering post-meal sugar spikes.

■ Day 3 Tip

Check your blood sugar 2 hours after dinner tonight. If it's under 140 mg/dL, you are on the right track. Write this in your Sugar Tracker sheet.

■ DAY 4 — THE SOUTH INDIAN DAY

Theme: Explore South India's naturally diabetes-friendly cuisine.

■■ Breakfast (7:30 AM – 8:30 AM)

Pesarattu (Green Moong Crepes) + Ginger Chutney

Detail	Value
Quantity	3 medium pesarattu + 2 tbsp ginger chutney
GI Score	36 ■
Prep Time	10 mins (use soaked moong from night before)

Calories	~230 kcal
----------	-----------

Quick Recipe:

- Blend soaked green moong with green chilli, ginger, cumin. Make smooth batter.
- Spread thin on non-stick tawa with minimal oil.
- Serve with fresh ginger chutney (blend fresh ginger + coconut + lemon).

■ Mid-Morning Snack (10:30 AM)

Small bowl of Papaya cubes (1 cup)

GI Score	Papaya: 60 (keep portion small ■)
----------	-----------------------------------

■ Lunch (1:00 PM – 2:00 PM)

Sambar Rice (small portion) + Rasam + Kootu (mixed vegetable curry)

Detail	Value
Quantity	½ cup sambar rice + 1 cup rasam + ½ cup kootu
GI Score	~48 (meal GI averaged ■)
Prep Time	40 minutes
Calories	~360 kcal

Why it works: Rasam contains tamarind and black pepper — both proven to improve insulin sensitivity. Kootu (dal + vegetable combination) is one of the most nutritionally complete Indian preparations.

■ Evening Snack (4:30 PM)

Idli (2 small, leftover from breakfast) + Coconut chutney

GI Score	~49 ■
----------	-------

■ Dinner (7:30 PM – 8:30 PM)

Multigrain Dosa (2) + Vegetable Stew

Detail	Value
GI Score	Multigrain Dosa: 42 ■
Prep Time	25 minutes
Calories	~350 kcal

■ Day 4 Tip

Replace your regular cooking oil with cold-pressed coconut oil or cold-pressed mustard oil. These contain medium-chain fatty acids that actually improve insulin sensitivity over time.

■ DAY 5 — THE NORTH INDIAN COMFORT DAY

Theme: Prove that Punjabi food can be diabetic-friendly too.

■■ Breakfast (7:30 AM – 8:30 AM)

Makki ki Roti (1) + Sarson ka Saag (½ cup) + Butter (½ tsp)

Detail	Value
GI Score	Makki Roti: 59 (pair with saag lowers meal GI ■)
Prep Time	20 minutes
Calories	~280 kcal

Why it works: Yes, a classic Punjabi breakfast can be diabetic-friendly! Makki (maize) has a slightly higher GI but when paired with sarson ka saag (high fiber, anti-inflammatory), the combined meal GI drops significantly. The small amount of butter improves fat-soluble vitamin absorption.

■ Mid-Morning Snack (10:30 AM)

Lassi (1 glass, no sugar, can add roasted jeera powder)

GI Score	Unsweetened Lassi: ~30 ■
----------	--------------------------

■ Lunch (1:00 PM – 2:00 PM)

Whole Wheat Roti (2) + Dal Makhani (low-fat version) + Onion-Tomato Salad

Detail	Value
Quantity	2 whole wheat rotis + 1 katori dal makhani + salad
GI Score	Whole Wheat Roti: 54 ■, Black Urad Dal: 43 ■
Prep Time	45 minutes
Calories	~430 kcal

Low-Fat Dal Makhani Recipe:

- Pressure cook 1 cup black urad dal and ¼ cup rajma.
- Temper with 1 tsp ghee, jeera, ginger-garlic, tomatoes.
- Add cooked dal, red chilli, salt. Simmer for 20 mins.
- Add 2 tbsp low-fat curd instead of cream. This gives the same richness with 70% less fat.

■ Evening Snack (4:30 PM)

Mathri made with Besan (2–3 pieces) + 1 cup green tea

GI Score	Besan (chickpea flour): 10 ■
----------	------------------------------

■ Dinner (7:30 PM – 8:30 PM)

Mixed Dal (Panchratna) + Jowar Roti (2) + Gobhi-Matar Sabzi

Detail	Value
--------	-------

GI Score	Mixed Dal: 32 ■
Prep Time	35 minutes
Calories	~400 kcal

■ Day 5 Tip

Drink 1 cup of cinnamon tea before bed (boil 1 cinnamon stick in 1.5 cups water for 10 minutes). Research shows this reduces fasting blood sugar the next morning by 7–9 mg/dL.

■ DAY 6 — THE DETOX & RESET DAY

Theme: Give your digestive system a lighter day to process this week's changes.

■■ Breakfast (7:30 AM – 8:30 AM)

Vegetable Poha (light, less oil) with Peanuts

Detail	Value
Quantity	1.5 cups poha
GI Score	48 ■ (when made with lots of vegetables and peanuts)
Prep Time	15 minutes
Calories	~220 kcal

Diabetes-Friendly Poha Recipe:

- Wash thin/medium poha. Drain well (do NOT soak for too long).
- In 1 tsp oil: mustard seeds, curry leaves, green chilli, onion.
- Add peas, carrot (finely diced). Sauté 3 mins.
- Add poha, turmeric, salt, lemon juice. Mix gently.
- Top with roasted peanuts and fresh coriander.
- Key: The peanuts lower the overall GI of the meal significantly.

■ Mid-Morning Snack (10:30 AM)

Coconut water (1 glass, fresh) + 1 small banana (HALF only)

GI Score	Coconut water: 3 ■ (natural electrolytes, no added sugar)
----------	---

■ Lunch (1:00 PM – 2:00 PM)

Khichdi (Moong Dal + Brown Rice) + Low-fat Kadhi

Detail	Value
Quantity	1.5 cups khichdi + 1 cup kadhi
GI Score	Moong Dal Khichdi: 52 ■
Prep Time	25 minutes
Calories	~360 kcal

Why it works: Khichdi is India's oldest therapeutic food. The moong dal + rice combination provides complete protein while remaining easy to digest. Kadhi (yogurt curry) provides probiotics.

■ Evening Snack (4:30 PM)

Amla (Indian Gooseberry) — 2 fresh or 1 tbsp amla powder in water

Why this works: Amla contains one of the highest concentrations of Vitamin C in nature AND unique compounds (emblicanin A & B) that have been shown in multiple Indian clinical trials to significantly lower fasting blood glucose levels.

■ Dinner (7:30 PM – 8:30 PM)

Light Vegetable Soup + Ragi Roti (1) + Moong Dal Sabzi

Detail	Value
GI Score	Soup: ~15 ■, Ragi roti: managed ■
Prep Time	20 minutes
Calories	~280 kcal (lighter dinner intentionally)

Why a lighter dinner: Your body processes food more slowly at night. A lighter dinner prevents a nighttime sugar spike and ensures a healthier fasting sugar reading the next morning.

■ Day 6 Tip

After Day 6, check your fasting blood sugar first thing tomorrow morning. Compare it with Day 1's fasting reading. Most people following this plan see a 10–25 mg/dL reduction by Day 7.

■ DAY 7 — THE CELEBRATION & SUSTAINABILITY DAY

Theme: Show that diabetic eating can be festive, joyful, and sustainable for life.

■■ Breakfast (7:30 AM – 8:30 AM)

Besan Cheela (Chickpea Pancakes) + Mint Chutney + 1 glass Chaas

Detail	Value
Quantity	2 cheelas + chutney + 1 glass chaas
GI Score	Besan: 10 ■ (one of the lowest GI foods in India)
Prep Time	15 minutes
Calories	~280 kcal

■ Mid-Morning Snack (10:30 AM)

Mixed Seed Mix (1 handful): flax seeds + sunflower seeds + pumpkin seeds

Why this works: Seeds are nature's blood sugar stabilizers. Flaxseeds contain lignans that reduce insulin resistance. Pumpkin seeds contain magnesium — the most common mineral deficiency in diabetics.

■ Lunch (1:00 PM – 2:00 PM)

YOUR CHOICE from the eBook!

Pick any breakfast/lunch recipe from the main 100+ Recipe eBook that you've been wanting to try. You have now built a solid 6-day foundation. Trust yourself.

■ Evening Snack (4:30 PM)

Guilt-Free Sweet Treat: Dates (2–3) stuffed with a small piece of walnut.

GI Score	Dates: 42 (Low  in moderation)
----------	---

Why you deserve this: You made it through 7 days! Dates have natural sugars but their high fiber content slows absorption. 2–3 dates will NOT spike your sugar if eaten with walnuts.

■ Dinner (7:30 PM – 8:30 PM)

Family Meal: Make one dish from the eBook that the whole family can enjoy.

Suggested: Palak Paneer with Bajra Rotis — the family favorite that is completely sugar-safe.

■ Day 7 Tip & Reflection

Tonight, sit quietly for 5 minutes and answer these questions in a journal:

1. How did my energy levels change from Day 1 to Day 7?

2. Did my post-meal heaviness reduce?

3. What was my favorite new recipe I discovered this week?

4. What ONE change from this week am I committed to keeping forever?

■ COMPLETE 7-DAY SHOPPING LIST

■ Grains & Flours (Anaj Section)

- ☐ Bajra (Pearl Millet) — 500g
- ☐ Jowar (Sorghum) — 500g
- ☐ Ragi (Finger Millet) — 500g
- ☐ Broken Wheat / Dalia — 500g
- ☐ Rolled Oats (plain, unflavored) — 500g
- ☐ Whole Wheat Atta (chakki fresh) — 1 kg
- ☐ Multigrain Atta — 1 kg
- ☐ Besan (Chickpea Flour) — 500g
- ☐ Makki ka Atta — 250g
- ☐ Brown Rice — 500g
- ☐ Thin Poha — 500g

■ Lentils & Legumes (Dal Section)

- ☐ Whole Moong (Green) — 500g
- ☐ Moong Dal (Yellow, split) — 500g
- ☐ Masoor Dal (Red) — 500g
- ☐ Chana Dal — 500g
- ☐ Arhar/Toor Dal — 500g
- ☐ Rajma (Kidney Beans) — 250g
- ☐ Black Urad Dal — 250g
- ☐ Panchratna Dal Mix — 500g

■ Vegetables (Sabzi Section) — Buy Fresh Every 2–3 Days

- ☐ Spinach (Palak) — 500g
- ☐ Fenugreek Leaves (Methi) — 1 bunch
- ☐ Mustard Leaves (Sarson) — 1 bunch
- ☐ Bottle Gourd (Lauki) — 1 medium
- ☐ Brinjal (Baingan) — 2 medium

- ☐ Okra (Bhindi) — 500g
- ☐ Cauliflower (Gobhi) — 1 small head
- ☐ Green Peas (Matar) — 200g
- ☐ Carrots — 4–5
- ☐ French Beans — 250g
- ☐ Tomatoes — 6–8
- ☐ Onions — 4–5
- ☐ Cucumber (Kakdi) — 3–4
- ☐ Drumstick (Sahjan) — 2–3 pieces

■ Fruits (Limited, Low-GI Only)

- ☐ Guava — 4–5
- ☐ Pears — 3–4
- ☐ Papaya — Half
- ☐ Amla (Gooseberry) — 6–8 (or 100g powder)

■ Dairy & Protein

- ☐ Low-fat Curd — 1 kg
- ☐ Paneer (homemade low-fat) — 250g
- ☐ Buttermilk / Chaas — as needed

■ Nuts & Seeds

- ☐ Almonds — 200g (soak overnight)
- ☐ Walnuts — 150g
- ☐ Peanuts (roasted, unsalted) — 200g
- ☐ Makhana (Foxnuts) — 200g
- ☐ Flaxseeds — 100g
- ☐ Pumpkin Seeds — 100g
- ☐ Sunflower Seeds — 100g

■ Spices & Herbs (for Blood Sugar Control)

- ☐ Cinnamon sticks — 50g
- ☐ Methi Seeds (whole) — 100g

- ☐ Jeera (Cumin) — 100g
- ☐ Turmeric Powder — 100g
- ☐ Black Pepper — 50g
- ☐ Ginger (fresh) — 100g
- ☐ Garlic (fresh) — 1 full head
- ☐ Tulsi leaves — 1 plant (if possible) or dried pack
- ☐ Amla Powder — 100g

■ **Cooking Essentials**

- ☐ Cold-pressed Coconut Oil or Mustard Oil — 500ml
- ☐ Pure Ghee (cow, A2 if possible) — 200g (use minimal, 1 tsp per meal)
- ☐ Apple Cider Vinegar (ACV) — 250ml bottle
- ☐ Coconut Water — fresh (Day 6 snack)

■ **DAILY BLOOD SUGAR MONITORING LOG**

Fill this every day during the 7-Day Plan. Bring this log to your next doctor appointment.

Day	Date	Fasting Sugar (Morning)	2hr Post-Breakfast	2hr Post-Lunch	2hr Post-Dinner	How I Felt (1-10)
Day 1						
Day 2						
Day 3						
Day 4						
Day 5						
Day 6						
Day 7						

Target Ranges for Reference:

- Fasting: 80–110 mg/dL (Ideal) / Under 126 (Acceptable)
- Post-meal (2hr): Under 140 mg/dL (Ideal) / Under 180 (Acceptable)

■ WHAT COMES NEXT?

Congratulations on completing the 7-Day Sugar Reset Plan!

You now have the knowledge and habits to continue this lifestyle independently. Here is your roadmap for Week 2 and beyond:

1. **Week 2:** Use your complete **100+ Recipe eBook** to continue discovering new low-GI Indian recipes and replace your old high-GI favorites one by one.
2. **Week 3–4:** Follow the **30-Day Diabetic Meal Planner** (included in the Pro Bundle) for a structured, progressive plan.
3. **Month 2–3:** Track your progress with the **Sugar Tracker & Medicine Log** and share the report with your doctor.
